

CLOUD ARCHITECTURE PLAN

Multi-User Cloud Database & Real-Time Sync

Enabling Cross-Device Listings, Bookings & Instant Live Chat Across Different Devices

🌐 1. Cross-Device Listings Sync

- When **Friend A** creates a listing (homestay, companion meetup, party) on their phone, it saves directly into Supabase in Mumbai.
- When **Friend B** opens the website on their computer in London, the listing immediately appears in their live feed.

📅 2. Cross-Device Bookings & Escrow Tally

- When **Friend B** requests to book, the booking record is saved to the cloud with the exact \$1 / ₹79 micro-fee recorded.
- **Friend A** receives the pending booking in their Host Dashboard to accept or decline.

⚡ 3. Real-Time WebSockets Chat

- Messages pass through our Anti-Bypass Contact Guardian in real-time.
- Supabase WebSocket channels stream new messages directly between both users' phones without page reloads.

✓ 4. Automated Build & Zero-Downtime Deployment

- Zero-error Next.js production build check (`npm run build`).
- Automatic push to GitHub repository (Techguybaba/roammeet) triggering Vercel live production deployment.
