

PRODUCTION MILESTONE

Multi-User Cloud Sync: Real-Time Cross-Device Marketplace

Live Database Reads • Cloud Writes • Real-Time WebSockets Messaging

✓ MULTI-USER CLOUD SYNC: 100% OPERATIONAL

1. Cross-Device Listings

When any user or friend posts a listing under *"Host a Stay/Plan"*, it writes immediately to the Supabase `listings` table. Every visitor across the world sees it live on their home feed!

2. Cross-Device Bookings

When a traveler submits a booking request, it writes to the `bookings` table with the \$1 / ₹79 fee calculated and links to both the traveler and host accounts.

3. Real-Time WebSockets Messaging

- Chat messages are saved directly into the `messages` table in Mumbai.
- Supabase Realtime WebSockets stream new messages between both devices instantly without page refreshes.
- Anti-Bypass Contact Shield continues to intercept and mask phone numbers, emails, WhatsApp links, and payment tags.

4. How to Test With Your Friends

- **Phone 1 (Host):** Log in, tap *"Host a Stay/Plan"*, and create a stay or meetup.
- **Phone 2 (Traveler):** Open the link, refresh the home feed — you will see the new listing published by Phone 1!
- **Book:** Tap *"Request to Book"* on Phone 2 — the booking is stored in your cloud database!
