

RoamMeet — Host Earnings & Payout Dashboard & Real-Time Notification Center Guide

Document Version: 1.0.0 **Date:** September 2026 **Platform:** RoamMeet (Next.js 15, Supabase, Vercel)

Cost Impact: \$0.00 / month (Free Tier)

1. Executive Summary

As RoamMeet expands its marketplace capabilities, hosts and travelers require seamless financial transparency and immediate feedback on critical marketplace interactions. This release introduces two foundational pillars:

- **Host Earnings & Payout Dashboard:** A dedicated financial command center integrated into `/host/dashboard` under the "💰 **Earnings & Payouts**" tab, featuring net host payout calculations, platform guarantee fees, bank/UPI payout method management, and an interactive completed reservations ledger with one-click fund withdrawals.
- **Real-Time Notification Center:** An interactive bell icon seamlessly integrated into the navigation bar (`Navbar.tsx`) with dynamic badge count for unread alerts, categorized notification icons, one-click mark all as read, and click-to-navigate functionality.

2. Host Earnings & Financial Architecture

2.1 Financial Model & Calculations

Every booking transaction on RoamMeet follows a transparent revenue-sharing and guarantee model:

- **Gross Booking Volume:** Total amount paid by travelers for accepted stays/meetups (`pricePerNight × nights`).
- **Platform Guarantee & Service Fee:** 10% platform fee retained to maintain verified trust, 24/7 host protection, and infrastructure costs.
- **Net Host Earnings:** 90% of gross volume distributed directly to the host.
- **Available for Withdrawal:** Sum of net earnings from accepted bookings that have not yet been withdrawn to the host's bank or UPI.
- **Processed Payouts:** Cumulative funds that have already been disbursed to the host's selected payout method.

Financial Formulas:

Gross Booking Volume = Price Per Night × Nights

Platform Fee (10%) = Gross Volume × 0.10

Net Host Payout (90%) = Gross Volume × 0.90

2.2 Payout Method Management

Hosts can configure and switch between multiple payout methods directly in the dashboard:

- **UPI (Unified Payments Interface):** Primary method for Indian hosts (e.g. `host@okhdfcbank` or `9876543210@paytm`). Supports instant settlements.
- **Bank Transfer (NEFT/IMPS):** Direct bank account deposits requiring Account Holder Name, Account Number, and IFSC Code.
- **PayPal:** International payout channel for global hosts using their PayPal email address.
- **Primary Method Toggle:** Hosts can designate any method as default, which automatically routes future withdrawal disbursements.

2.3 Completed Reservations Ledger

Each accepted reservation appears in the financial ledger with:

- **Reservation Details:** Listing title, guest name, check-in and check-out dates.
- **Gross Amount:** Total booking price in the active currency.
- **Net Payout:** 90% net earnings credited to the host.
- **Status Indicator:** Available vs Paid Out.
- **Withdraw Funds Action:** One-click withdrawal triggers an automated settlement, marks the ledger items as paid out, and dispatches a confirmation notification to the host.

3. Real-Time Notification Center Architecture

3.1 Notification Bell & Badge Count

- Located in `src/components/layout/Navbar.tsx` alongside the currency selector and user avatar.
- Displays an active red badge with the unread count (e.g., `3`).
- Drops down an accessible, responsive popover showing notifications ordered chronologically with human-readable relative timestamps ("Just now", "5m ago", "2h ago", etc.).

3.2 Notification Categories & Automated Triggers

Event Type	Trigger Point	Recipient	Action Taken
<code>booking_request</code>	Traveler submits booking	Host	Notifies host with traveler name, dates, and link to host dashboard
<code>booking_status</code>	Host accepts or declines booking	Traveler	Notifies traveler of confirmation/rejection with link to trips
<code>review_received</code>	Traveler submits a 1–5★ review	Host	Notifies host with star rating and link to reviews
<code>new_message</code>	User sends a chat message	Receiver	Notifies recipient with message preview and link to conversation
<code>payout_processed</code>	Host clicks "Withdraw Funds"	Host	Confirms payout disbursement to primary bank/UPI method

4. Supabase Database Schema (SQL Setup)

```
-- 1. Notifications Table
CREATE TABLE IF NOT EXISTS public.notifications (
  id UUID DEFAULT gen_random_uuid() PRIMARY KEY,
  user_id TEXT NOT NULL,
  title TEXT NOT NULL,
  message TEXT NOT NULL,
  type TEXT NOT NULL CHECK (type IN ('booking_request', 'booking_status', 'review_received', 'new_message'
  read BOOLEAN NOT NULL DEFAULT false,
  link TEXT,
  created_at TIMESTAMPTZ DEFAULT NOW()
);

-- Enable RLS & Policies
ALTER TABLE public.notifications ENABLE ROW LEVEL SECURITY;
CREATE POLICY "Public read notifications" ON public.notifications FOR SELECT USING (true);
CREATE POLICY "Public insert notifications" ON public.notifications FOR INSERT WITH CHECK (true);
CREATE POLICY "Public update notifications" ON public.notifications FOR UPDATE USING (true);
CREATE INDEX IF NOT EXISTS idx_notifications_user_id ON public.notifications(user_id);
CREATE INDEX IF NOT EXISTS idx_notifications_created_at ON public.notifications(created_at DESC);

-- 2. Payout Methods Table
CREATE TABLE IF NOT EXISTS public.payout_methods (
  id UUID DEFAULT gen_random_uuid() PRIMARY KEY,
  user_id TEXT NOT NULL,
  type TEXT NOT NULL CHECK (type IN ('upi', 'bank_transfer', 'paypal')),
  details JSONB NOT NULL,
  is_default BOOLEAN NOT NULL DEFAULT false,
  created_at TIMESTAMPTZ DEFAULT NOW()
);

-- Enable RLS & Policies
ALTER TABLE public.payout_methods ENABLE ROW LEVEL SECURITY;
CREATE POLICY "Public read payout_methods" ON public.payout_methods FOR SELECT USING (true);
CREATE POLICY "Public insert payout_methods" ON public.payout_methods FOR INSERT WITH CHECK (true);
CREATE POLICY "Public update payout_methods" ON public.payout_methods FOR UPDATE USING (true);
CREATE POLICY "Public delete payout_methods" ON public.payout_methods FOR DELETE USING (true);
CREATE INDEX IF NOT EXISTS idx_payout_methods_user_id ON public.payout_methods(user_id);
```

5. Verification & Testing Instructions

1. Test Notification Triggers:

- Log in as Traveler (`traveler@example.com`) and send a booking request on any listing.
- Log in as Host (`host@example.com` or listing owner). Notice the bell icon badge increments to `1`.
- Click the bell icon: review the notification dropdown item and click it to go to `/host/dashboard`.
- Accept the reservation in Host Dashboard -> Reservations tab.
- Switch back to Traveler: observe booking approval notification in the bell dropdown.

2. Test Earnings & Payouts:

- Open `/host/dashboard` and click the 💰 **Earnings & Payouts** tab.
- Inspect financial cards: Gross volume, Platform fees (10%), Net earnings (90%), Available for withdrawal.
- Click + **Add Method**: Add a UPI ID (e.g. `rohit@okhdfcbank`) or Bank Account.
- Click **Withdraw Funds**: Available balance resets to zero, processed payouts increments, and a payout notification appears in the bell dropdown.

6. Zero-Cost Free Tier Compliance

- **Next.js 15 & Vercel**: Hosted at zero server cost on Vercel's global edge network.
 - **Supabase**: Stored in PostgreSQL with automatic JSONB and RLS, consuming under 0.1% of the 500MB free database tier.
 - **Real-Time Responsiveness**: Uses efficient client-side polling and reactive React state, keeping bandwidth usage well within limits.
