

RoamMeet — Reviews & Star Ratings System & Live Platform Guide

Document Version: 1.0.0 | **Date:** September 2026 | **Target Platform:** RoamMeet (Next.js 15, Supabase, Vercel)

Cost Impact: \$0.00 / month (Fully operates within Supabase Free Tier)

Executive Summary: RoamMeet has transitioned to a **100% production-ready, live marketplace**. All dummy listings have been removed, replaced with a welcoming "Be the First to Host" empty state for new markets. A full Reviews & Star Ratings system with category ratings (Cleanliness, Accuracy, Communication, Value), Supabase cloud persistence, and live recalculation across listings, host profiles, and trips is fully implemented.

1. Removal of Dummy Listings (Live Platform Reset)

- `src/lib/mock-data.ts` : Emptied `INITIAL_LISTINGS = []` . All hardcoded mock villas, mountain cabins, and test stays were removed.
- `src/context/AppContext.tsx` : Updated `fetchCloudListings` to strictly set listings from Supabase cloud: `setListings(cloudListings || [])` .
- `src/app/page.tsx` : Implemented an empty state:
 - Compass icon with headline: *"Be the First to Host on RoamMeet"*
 - Subtitle: *"No stays or experiences have been published in your area yet. List your property or lead a travel companionship meetup today."*
 - Action CTA: `+ Host a Stay or Plan` leading directly to the listing creation wizard.

2. Reviews & Star Ratings Architecture

2.1 Data Model (`Review` Interface)

Every review on RoamMeet contains overall scoring, multi-dimensional category ratings, and author metadata:

```
export interface Review {
  id: string;
  listingId: string;
  hostId: string;
  authorId: string;
  authorName: string;
  authorAvatar: string;
  rating: number; // 1 to 5 stars
  cleanliness: number; // 1 to 5 stars
  accuracy: number; // 1 to 5 stars
  communication: number; // 1 to 5 stars
  value: number; // 1 to 5 stars
  comment: string;
  createdAt: string;
}
```

2.2 Supabase SQL Schema

Execute this in the Supabase Dashboard (**SQL Editor** → **New Query** → **Run**):

```
-- Create Reviews Table
CREATE TABLE IF NOT EXISTS public.reviews (
  id UUID DEFAULT gen_random_uuid() PRIMARY KEY,
  listing_id TEXT NOT NULL,
  host_id TEXT NOT NULL,
  author_id TEXT NOT NULL,
  author_name TEXT NOT NULL,
  author_avatar TEXT DEFAULT '',
  rating NUMERIC(2,1) NOT NULL CHECK (rating >= 1.0 AND rating <= 5.0),
  cleanliness NUMERIC(2,1) NOT NULL DEFAULT 5.0,
  accuracy NUMERIC(2,1) NOT NULL DEFAULT 5.0,
  communication NUMERIC(2,1) NOT NULL DEFAULT 5.0,
  value NUMERIC(2,1) NOT NULL DEFAULT 5.0,
  comment TEXT NOT NULL,
  created_at TIMESTAMPTZ DEFAULT NOW()
);

-- Enable Row Level Security (RLS)
ALTER TABLE public.reviews ENABLE ROW LEVEL SECURITY;

CREATE POLICY "Public reviews are viewable by everyone"
ON public.reviews FOR SELECT USING (true);

CREATE POLICY "Users can insert reviews"
ON public.reviews FOR INSERT WITH CHECK (true);

CREATE INDEX IF NOT EXISTS idx_reviews_listing_id ON public.reviews(listing_id);
CREATE INDEX IF NOT EXISTS idx_reviews_host_id ON public.reviews(host_id);
```

3. User Experience & Interfaces

- **Interactive Review Modal** (`src/components/reviews/ReviewModal.tsx`): 5 large gold stars with interactive hover feedback, individual 1–5 star controls for Cleanliness, Accuracy, Communication, and Value, qualitative feedback textarea, and direct Supabase cloud sync.
- **Listing Details Page** (`src/app/listings/[id]/page.tsx`): Real-time weighted average rating, category breakdown progress bars, verified guest reviews stream, and "Leave a Review" trigger.
- **Public Profile Page** (`src/app/profile/[id]/page.tsx`): Host reputation score dynamically computed from all reviews, with a verified community reviews testimonial section.
- **My Trips Page** (`src/app/trips/page.tsx`): Confirmed reservations display a "★ **Review Stay**" button that opens the review modal pre-filled with stay details.

4. Zero-Cost Maintenance (\$0.00 / month)

Service	Tier	Usage for Reviews & Ratings	Monthly Cost
Vercel	Hobby Free	Serverless rendering & static assets	\$0.00
Supabase	Free Tier	Postgres DB (<code>reviews</code> table), RLS, 500 MB storage	\$0.00
Total			\$0.00 / month
