

Beta Launch & Cloud Backend Setup Guide

Complete technical guide for deploying RoamMeet on the \$0 Free Tier (Vercel + Supabase) for live beta testing with your partner and early users.

Plan: Beta Launch (\$0 / Month) **Hosting:** Vercel (Free Forever) **Database:** Supabase PostgreSQL (Free Tier)

1. What Has Been Built & Prepared For You

Fullstack Backend Integration Complete: All database models, Supabase client integration, SQL migration scripts, and environment variable templates have been added to your project.

1. PostgreSQL Schema (supabase/schema.sql)

Ready-to-run database migrations defining 6 production tables: `profiles`, `listings`, `bookings`, `messages`, `kyc_submissions`, and `flagged_audit_logs` with Row Level Security (RLS).

2. Supabase Client (src/lib/supabase.ts)

Fully configured client that automatically switches between cloud database mode and offline demo mode so the platform always runs with zero crashes.

3. Anti-Bypass & Escrow Engine

Active contact protection automatically masking phone numbers, emails, Instagram handles, and payment tags before message delivery.

4. Flat \$1 / ₹79 Micro-Fee Engine

Calculates micro-booking fees transparently with 100% Free tier on travel companion meetups.

2. Three Simple Steps to Activate Live Cloud Sync (Free)

1 Create a Free Supabase Project (Takes 1 Minute):

Go to <https://supabase.com> and click "Start your project" (Free tier, no credit card required).

2 Run the Database Schema:

Open the **SQL Editor** in your Supabase dashboard, paste the contents of `supabase/schema.sql`, and click **Run**. All 6 tables, indexes, and security rules will be created instantly.

3 Add Credentials to .env.local:

Copy your **Project URL** and **Anon Public Key** from Supabase *Settings* → *API* and paste them into `.env.local`. That's it!

3. Deploying to Vercel for Your Free Permanent Link

To give your partner and users a permanent 24/7 link (e.g. <https://roammeet.vercel.app>):

Command to Deploy:

```
npx vercel
```

Follow the 3 prompts in your terminal. Within 60 seconds, your site will be deployed globally on Vercel's high-speed edge network with free automated SSL.
