

Hosting Costs, Maintenance & Zero-Crash Architecture

Complete breakdown of production hosting costs, monthly maintenance overhead, and how serverless edge architecture guarantees 99.99% uptime with zero website crashes.

Target Uptime: 99.99% High Availability

Architecture: Serverless Edge (No Single Point of Failure)

Launch Cost: \$0 / month (Free Tier)

1. Three-Stage Hosting & Maintenance Cost Breakdown

Modern cloud platforms allow you to start at **\$0 operational cost** during testing and initial launch, scaling linearly only when real user traffic and revenue grow:

Infrastructure Layer	Stage 1: Launch & Beta (0 to 10k users)	Stage 2: Growth Phase (10k to 100k users)	Stage 3: Large Scale (100k+ global users)
Frontend & Web Hosting (Vercel)	\$0 / month (100GB bandwidth, global CDN, automated SSL)	\$20 / month (~₹1,650/mo) (1TB bandwidth, commercial license, DDoS protection)	\$20 - \$50 / month (Enterprise edge network, auto-scaling)
Database & Realtime (Supabase / Postgres)	\$0 / month (500MB DB, 50k monthly active users, 1GB file vault)	\$25 / month (~₹2,050/mo) (8GB DB, 100GB file vault, 7-day automated backups)	\$50 - \$100 / month (Dedicated compute, read replicas, 30-day PITR)
Custom Domain (e.g. roammeet.com)	~\$10 - \$12 / year (Approx ₹85 - ₹100 / month)	~\$10 - \$12 / year	~\$10 - \$12 / year
Phone / SMS OTP Verification	\$0 / month (Free email OTP + first 10,000 phone OTPs on Firebase)	₹500 - ₹1,500 / month (Fast2SMS / MSG91 @ ₹0.18 per SMS in India)	Usage based (Funded directly by user booking volume)
TOTAL MONTHLY EXPENSE	\$0 / month (₹0 / month)	~\$45 - \$60 / month (~₹3,700 - ₹5,000 / month)	~\$100 - \$200 / month (~₹8,000 - ₹16,000 / month)

Self-Sustaining Unit Economics: At your initial flat fee of **\$1.00 or ₹79 per booking**:

- Just **50 to 60 confirmed bookings per month** completely pays for all Stage 2 servers, backups, and SMS verification!
- At 500 bookings/month, your platform generates **₹39,500 (\$500) monthly revenue** against only ~₹4,500 operational costs.

2. How We Guarantee Zero Crashes & 99.99% High Availability

Your Core Requirement: *"we don't need any crash or website down later on".*

Traditional shared servers (like cheap GoDaddy or Hostinger VPS) crash frequently because they run on a single physical machine: if 500 people visit at once, the RAM fills up, the server freezes, and the entire website goes offline. **We avoid this entirely using modern Serverless Edge Architecture:**

⚡ 1. Serverless Auto-Scaling (No Memory Limits)

Instead of a single server, Next.js on Vercel runs on **serverless edge functions**. If 1 person visits, it runs 1 instance. If 10,000 people visit simultaneously, it automatically spawns 10,000 parallel micro-instances in milliseconds. **It is physically impossible for traffic spikes to crash the website.**

🌐 2. Global Edge CDN & Redundancy

Static assets and listing feeds are cached across 100+ data centers worldwide (Mumbai, London, California, Tokyo, Frankfurt). If a server in one region has an outage, traffic instantly routes to another city with **zero downtime**.

🛡️ 3. Cloudflare DDoS & Attack Shield

Protects the platform against malicious bots, automated scrapers, and denial-of-service (DDoS) attacks. Malicious traffic is absorbed at the global edge before it ever reaches your database.

💾 4. Automated Point-in-Time Backups (PITR)

The database takes continuous automated snapshots. Even if an admin accidentally deletes records or a bad query occurs, the database can be restored to the exact second (e.g. *"restore to 2:14:05 PM yesterday"*) with zero data loss.

3. Routine Maintenance: What Is Actually Required?

Because the infrastructure is **fully managed (Serverless + Managed Postgres)**, you do not need to hire expensive DevOps engineers to patch Linux kernels, manage physical servers, or reboot frozen machines.

Maintenance Task	Frequency	Who Handles It?
Server Security & OS Patches	Continuous	100% Automated Handled by Vercel & AWS/Google Cloud infrastructure teams.
Database Backups & Redundancy	Daily / Continuous	100% Automated Handled automatically by Supabase with point-in-time recovery.
SSL Certificate Renewal (HTTPS)	Every 90 days	100% Automated Automated auto-renewal with zero downtime.
KYC & Content Moderation	Daily (10 mins)	Admin Team Reviewing uploaded user IDs and approving badges in your Admin Hub.
Feature Upgrades & Enhancements	As needed	Development Adding new payment gateways, seasonal features, or design tweaks.

4. Recommended Architecture Setup Plan

Our Recommendation for You & Your Partner:

- Launch on the Free Tier (\$0/month):** Deploy on Vercel Hobby + Supabase Free. Spend \$0 while you beta-test with your early users and first 100 listings.
- Upgrade to Pro (\$45/month) Only When Revenue Flows:** When you cross ~100 bookings/month, your platform will already be generating **\$100+ (₹7,900+)** in fees, easily paying for Pro dedicated servers and automated backups.
