

PRODUCTION BETA LAUNCH

RoamMeet: Vercel Deployment & Live Link

Publishing Your Web App to a Permanent, Globally Fast Public URL (100% Free)

✓ Milestone Achieved: Cloud Database is 100% Live!

Your Supabase SQL execution completed with **"Success. No rows returned"**. All 6 PostgreSQL tables, real-time channels, search indexes, and anti-bypass tables are active in the Mumbai data center.

1 Quick 5–Second Permission Polish (In Supabase SQL Editor)

In your current open Supabase SQL tab, paste and run this tiny 4–line snippet so guest signups and profile updates work smoothly:

```
CREATE POLICY "Allow insert profiles" ON public.profiles FOR INSERT WITH CHECK (true);
CREATE POLICY "Allow update profiles" ON public.profiles FOR UPDATE USING (true);
CREATE POLICY "Allow update listings" ON public.listings FOR UPDATE USING (true);
CREATE POLICY "Allow update bookings" ON public.bookings FOR UPDATE USING (true);
```

Click **Run** (Ctrl+Enter) — you will see *"Success. No rows returned"* again.

2 How Vercel Works & What Your Public Link Looks Like

Vercel is the official cloud platform created by the makers of Next.js. Deploying here gives you:

Public Live Link

e.g. roammeet.vercel.app accessible on any phone or PC worldwide.

Free SSL (HTTPS)

Automatic green lock security certificate for trusted payments & logins.

Laptop Can Be Off

Runs 24/7 on high-speed cloud edge servers with zero battery or CPU drain on your PC.

3 How We Deploy: 1–Click via Vercel Dashboard

Step A: Go to vercel.com/signup and click **"Continue with GitHub"** (using your same GitHub account).

Step B: Click **"Add New..."** > **"Project"**, select your repository, add your 2 Supabase keys, and click **"Deploy"**.

Step C: Within 45 seconds, your live production website is born!

RoamMeet Architecture • Zero Recurring Hosting Costs • Supabase + Next.js + Vercel
