

SUPABASE AUTH QUICK FIX

How to Fix "Email Not Confirmed"

A 30-second fix in Supabase to allow instant account creation without requiring users to verify their email inbox.

Why Did This Happen?

By default, Supabase turns ON a security setting called **"Confirm email"**. When this is ON, Supabase sends a verification link to your email (e.g. `karanatwork000@gmail.com`) and locks the account until that link is clicked. For rapid testing and beta onboarding, founders always turn this OFF so everyone can sign in immediately without waiting for an email.

1 Turn OFF "Confirm Email" in Supabase (Takes 30 Seconds)

1. Open your Supabase project in your browser:

<https://supabase.com/dashboard/project/ujozwejsvccbqhezkzott/auth/providers>

2. Click on the **Email** provider to open its settings.
3. Find the setting labeled **"Confirm email"** (or "Enable email confirmations").
4. Switch the toggle to **OFF (Disabled)**.
5. Click the green **Save** button at the bottom right.

✅ From now on, any friend or user who signs up will be logged in immediately in 1 second!

2 How to Unlock your existing account (karanatwork000@gmail.com)

You have two very easy ways to confirm your current account right now:

1. **Option A (Check Inbox):** Open your Gmail (`karanatwork000@gmail.com`), look for an email from Supabase / RoamMeet, and click **"Confirm your mail"**.
2. **Option B (Direct in Supabase Dashboard):**
 - o Go to: <https://supabase.com/dashboard/project/ujozwejsvccbqhezkzott/auth/users>
 - o Find `karanatwork000@gmail.com` in the user list.
 - o Click the three dots (`...`) on the right side of the row.
 - o Click **"Auto-confirm user"** or **"Confirm email"**.
