

TROUBLESHOOTING & ACTIVATION GUIDE

Fixing Google Sign-In & Enabling OAuth

Plain-English explanation of why "provider is not enabled" appears, plus 3-minute setup to turn on 1-click Google logins.

⚠ Why Did This Error Appear?

```
{"code":400,"error_code":"validation_failed","msg":"Unsupported provider: provider is not enabled"}
```

In Supabase, standard **Email & Password** authentication works automatically right out of the box with zero configuration. However, third-party social logins like **Google** require Google to know your app's identity (a free Google OAuth Client ID) and require you to toggle the switch to **ON** in your Supabase dashboard.

💡 Immediate Instant Option (Zero Setup Needed)

You and your friends **do not have to wait** to test the website! Simply use the **"Email & Password"** form directly beneath the Google button. Anyone can type any email, choose a password, and click **Create Account** or **Log In** to test hosting and booking immediately!

How to Enable 1-Click Google Login (Takes ~3 Minutes)

1 Get Free Google OAuth Keys from Google Cloud Console

1. Open your browser and navigate to **Google Cloud Console**: `https://console.cloud.google.com/apis/credentials`
2. Select or create a project named **RoamMeet**.
3. Under **APIs & Services > OAuth consent screen**, select **External**, set App Name to `RoamMeet`, enter your email, and click **Save & Continue**.
4. Under **Credentials**, click **+ CREATE CREDENTIALS > OAuth client ID**.
5. Choose **Application type: Web application**. Name it `RoamMeet Auth`.
6. Under **Authorized redirect URIs**, click **+ ADD URI** and paste your exact Supabase callback URL:

```
https://ujozwejsvccbqhezkzott.supabase.co/auth/v1/callback
```

7. Click **CREATE**. Google will show you a **Client ID** and a **Client Secret**. Keep this tab open!

2 Turn ON Google in your Supabase Project Dashboard

1. Open your Supabase project in your browser:

```
https://supabase.com/dashboard/project/ujozwejsvccbqhezkzott/auth/providers
```

2. Scroll down the list of providers and click on **Google**.
3. Switch the toggle **Enable Google provider** to **ON**.
4. Paste your **Client ID** into the `Client ID (for OAuth)` field.
5. Paste your **Client Secret** into the `Client Secret (for OAuth)` field.
6. Click the green **Save** button at the bottom right.

3 Test & Enjoy 1-Click Sign-In!

Return to your live website and click **"Continue with Google"**. Google's native account chooser will immediately pop up. Clicking your Google account will instantly create your profile, fetch your Google avatar, and log you in smoothly!
